VELLORE INSTITUTE OF TECHNOLOGY, BHOPAL

DIGITAL LITERACY PROJECT REPORT

COURSE CODE: CSE0001

COURSE TITLE: Digital Literacy

SUBMITTED BY:

Atharv Bisht

REGISTRATION NUMBER:

25BCE10596

BRANCH:

Computer Science & Engineering (Core)

INSTITUTION:

VIT Bhopal University

OVERVIEW:

This project was completed as part of the Digital Literacy course to understand the importance of using digital tools effectively and responsibly. As a student, it is important to not only use technology but also understand how to use it safely and professionally. Through this project, I worked on different tasks such as creating an infographic, building a digital portfolio, exploring coding and collaboration platforms, learning email etiquette, and understanding cybercrime awareness.

Each task helped me gain practical knowledge about different aspects of digital literacy. The project also helped me improve my ability to present information, communicate professionally, and stay aware of online risks. Overall, it was a useful learning experience that will help me in my academic and professional journey.

Task – 01

For this task, I created a digital literacy infographic using Canva. I selected a simple and clean layout so that the information is easy to read and understand quickly. In my infographic, I included topics such as digital literacy, safe internet practices, email etiquette, and professional online presence. I focused on keeping the content short and clear instead of adding too much text, since infographics are meant to be visually simple.

While designing, I used basic colors and icons to make the infographic look attractive without making it too crowded. One challenge I faced was arranging all the information properly on a single page. It took some time to adjust the layout so that everything looked balanced and readable.

Overall, this task helped me understand how to present information in a visual format. It also made me realize the importance of digital literacy and how it plays an important role in a student's daily life.

Task – 02

I created my digital portfolio using GitHub, LinkedIn, and Kaggle. On GitHub, I set up a profile README where I introduced myself, mentioned my branch, institution name and wrote about my interests and what I want to learn. This helps in presenting my profile in a simple and organized way. On LinkedIn, I added my educational details, including my degree, institution and expected graduation year, which is useful for building a professional identity online. I also created an account on Kaggle, which is a platform for learning and practicing data science and machine learning.

Each of these platforms serves a different purpose, but together they help in building a strong digital presence. In the coming years, I plan to regularly update my GitHub with projects, improve my LinkedIn profile with skills and achievements, and explore Kaggle to learn more about data analysis. I believe these platforms will help me improve my skills and prepare for future internships and career opportunities.

Task – 03

For this task, I explored both a coding platform (HackerRank) and a collaborative tool, i.e., Google Forms. I used HackerRank to solve a beginner-level problem. I already have some experience with the platform and have earned a 4-star rating in Python, so I was comfortable navigating it. Solving the problem helped me revise basic concepts and understand how coding challenges are structured.

In the second part, I created a Digital Literacy Awareness Quiz using Google Forms. I added five questions, including both multiple-choice and short answer types, based on topics like online safety and general digital awareness. I tried to keep the questions simple and clear so that anyone attempting the quiz could easily understand them.

After creating the form, I submitted a response myself and checked the responses in Google Sheets. This helped me understand how data is collected and organized automatically.

Overall, this task helped me work with useful tools for both coding practice and data collection, which will be helpful in my academic work.

Task – 04

One situation where poor digital communication can cause problems is when a student sends an unclear message in a group project chat. For example, a student might write a short message like “I’ll do it later” without explaining what exactly they will do or when they will complete it. This can confuse other group members and lead to delays or misunderstandings in the work.

This situation could have been handled better if the student had communicated more clearly. They should have mentioned what task they were taking responsibility for and given a proper time frame. Clear and complete messages help everyone understand their roles and avoid confusion.

This shows that even small communication mistakes can create problems, and being clear and specific is important while communicating online.

Task – 05

While working on this task, I was surprised by how common phishing attacks are and how easily people can fall for them. Many of these scams look very real, which makes them difficult to identify at first. I realized that even a small mistake, like clicking on a suspicious link or sharing an OTP, can lead to serious problems.

This task made me more aware of online safety and the importance of being careful while using the internet. One habit I will change is that I will always verify links, messages, and payment requests before trusting them. I will also be more cautious while sharing any personal or financial information online.

Overall, this task helped me understand the importance of staying alert and protecting myself from cyber threats.

CONCLUSION:

This project helped me understand different aspects of digital literacy in a practical way. From creating an infographic to learning about cybercrime, each task gave me useful knowledge and skills. I learned how to present information clearly, communicate professionally, and use online platforms effectively. The project also made me more aware of online safety and responsible internet usage. Overall, it was a valuable experience that will help me in my academics as well as in future professional situations.
